Rudresh **Veerkhare**

Senior Analyst, Deutsche India

rudresh.net | veerkharerudresh@gmail.com | RudreshVeerkhare | rudresh-veerkhare | Google Scholar

Research Interests

I am interested in creating robust and dependable **Document Understanding** systems that facilitate data extraction and analysis from multi-modal documents, further supporting data-driven machine learning.

- **Multimodal Document Processing**: Developing techniques for structured data extraction that encompass textual, visual, and spatial information.
- **Document Analysis utilizing Generative AI**: Employing Multimodal Document Processing to empower Generative AI, like Large Language Models, in building robust and reliable Data Analysis Pipelines.

Education

May 2022 | **Sardar Patel Institute of Technolgy** — **Mumbai, India**
Aug 2018 | B.Tech, Computer Engineering | **CGPA**: 9.63/10

Publications

Experience

Present / **Jul 2022** | **Deutsche India | Chief Technology Office, TDI** — **Pune, India**
Senior Analyst
I'm working on OCR and **Document Understanding** to streamline document processing. My work spanned **Custom Document Entity Extraction**, **Smart Document Splitting**, **LLM-aided Contract Drafting**, and innovative software automations like **Automated Vulnerability Scanning**. I have also worked on the adaptation of **Document AI** within the organization and have experience in **Software Governance**.

Jul 2021 / **Jun 2021** | **Deutsche India | Chief Technology Office, TDI** — **Pune, India**
Technology Analyst Intern
As part of the research project, I worked on Optical Character Recognition, which encompassed tasks such as **Table Detection**, **Table Structure Recognition** from scanned documents, **Signature Extraction**, **Custom Named Entity Recognition**, and **Intelligent Character Recognition**.

Apr 2021 / **Jan 2021** | **Sardar Patel Institute of Technology** — **Mumbai, India**
Research Assistant | Advisor: **Prof. Pramod Bide**
I conducted research in the field of **Cross Event Detection** and **Topic Evolution Mining** from Social Media Posts, developing innovative algorithms for Cross Event Detection and **Sub-Topic Evolution** through the application of statistical NLP techniques.

Awards

- **India Excellence Award (Deutsche Bank, Feb 2023)** Award granted to only **280 out of 17000** (1.65%).
- **Best Graduation Project Exhibition Award (SPIT Mumbai, Apr 2022)** Awarded **1st prize** for project **FedSpam**.

Research Projects

FedSpam: Privacy Preserving SMS Spam Detection (Team Size: 3)
Federated Learning, NLP, Edge Computing

› FedSpam is an edge computing application which leverages **Federated ML** to **preserve the user data privacy** while using the advanced data-driven ML solutions for spam detection.

CustomXGBoost: XGBoost Implementation with Optimizers (Solo) [in |]
Gradient Boosting, Optimizers

› XGBoost **Implementation from scratch** where I've modified the **gradient boosting** to utilize optimizers such as **ADAM** and **RMSProp**.

Arbit: A Decentralized Crypto Exchange Arbitrage System (Solo)
Linear Algebra & Graphs, Blockchain Smart Contracts

› Developed an efficient algorithm with **O(1)** time complexity for detecting **Nth order arbitrage** opportunity in Decentralized Crypto Exchanges (DeX).

› Utilized graphs and linear algebra in the derivation process.

› Implemented the system on the Cloud with optimal regions for low network latency, enabling continuous real-time blockchain monitoring and swift execution of profitable arbitrage transactions.

› Created a profitable personal project, generating approximately **$10,000** in cryptocurrency in early 2022.

HRescue: A Modern ML approach for Employee Attrition Prediction (Team Size: 3)
Gradient Boosting, Explainable AI, Data Augmentations

› Numerous attrition prediction methods have been developed in the past. However, This approach focuses on **interpretability** of ML models for sensitive employee attrition decisions and **outperforms prior methods** while addressing **data imbalance**.

Face To BMI: A Deep Learning Based Approach for Computing BMI from Face (Team Size: 3)
Computer Vision, Transfer Learning, Discriminative Learning

› Developed a BMI prediction model from facial images using **transfer learning** on deep convolution networks, implementing **discriminative learning** to train the last few layers with varying learning rates for further model fine-tuning.

› Used **Tensor Processing Unit** for training Deep Learning models.

Software Projects

Catalyst (Solo) [| | in]
Open Source, Node js, VSCode Extension

› Catalyst is a VS code Extension to accelerate the process of solving problems on Codeforces. It has **3000+ installed user and 12000+ downloads**

ReactPy (Solo) [| in]
Open Source, Web Python, Algorithm

› ReactPy is a implementation of React in Python using Brython. It's a **from scratch implementation** of **React Fiber**, along with **diffing and Virtual DOM** in Python 3.

Numras (Solo) [ ]
Open Source, Numpy, Neural Networks

› A **mini-framework** completely **implemented from scratch** using Numpy. Its api is similar to **Keras**. All of the operations like forward pass, backward pass and optimizations are carried mathematically from scratch.

Recruitment Assisting Platform (Team Size: 4) [ ]
Data Mining, Data Visualization

› Used **Latent Dirichlet Allocation (LDA)** for grouping candidates based on the Resume.

Elliptical Curve Diffie Hellman (Solo) [ ]
Cryptography, Algorithms

› Implemented **Elliptical Curve Diffie Hellman Key Exchange algorithm**, from scratch.

Technical Skill

Programming	Python 3, Java, C, C++, Java, JavaScript, Typescript, Solidity, PowerShell, Shell Script
Frameworks & Libraries	PyTorch, Numpy, Keras, Tensorflow, Scikit-Learn, Huggingface, LangChain, ReactJS, NextJS, Django, Flask, FastAPI, SpringBoot

Relevant Course Work

● Artificial Intelligence and Soft Computing ● Fundamentals of Computational Intelligence ● Machine Learning ● Big Data Analytics ● Data Science ● Data Warehouse Mining ● Human Machine Interaction ● Operating Systems ● Discrete Structure and Graph Theory ● Theoretical Computer Science ● Advanced Data Structures ● Distributed Systems ● Digital Signal Processing ● Database Management Systems ● Design and Analysis of Algorithms ● Engineering and Applied Mathematics

Volunteering

40+ Hours of CSR, Deutsche India **2022 - Present**

- Volunteered for development of applications to spread awareness about Mental Health.
- Volunteered for School Kit Assembly and Distribution for underprivileged children.
- Volunteered for crafting of environment friendly paper bags.

Scikit Learn Open Source Contribution [|] **Nov 2022**

- Implemented an Enhancements Proposal for allowing Minkowski distance with $0 < p < 1$.

10+ Hours of SEVA, Mumbai **2019 - 2020**

- Volunteered for teaching Maths and Science to high school underprivileged children.
- Volunteered for Mumbai's Beach Cleaning.

Hackathons

- **Predicting House Prices In Bengaluru (Machine Hack, Feb 2021)** Ranked **6th** out of 403 submissions (Top 1.4%).
- **Predict The Data Scientists Salary In India (Machine Hack, July 2020)** Ranked **3rd** out of 192 submissions (Top 1.5%).
- **Predict The Price Of Books (Machine Hack, July 2020)** Ranked **46th** out of 847 submissions (Top 5%).
- **Video Game Sales Prediction (Machine Hack, June 2020)** Ranked **24th** out of 231 submissions (Top 10%).
- **Computer Vision Classic (Machine Hack, July 2020)** Ranked **10th** out of 87 submissions (Top 11%).
- **JanataHack: Machine Learning for IoT (Analytics Vidya, May 2020)** Ranked **28th** out of 202 submissions (Top 14%).
- **KJSCE HACK 6.0 (KJSCE Mumbai, Apr 2022)** Won the Filecoin Track Prize of **$260**.
- **SPIT Hackathon 2021 (SPIT Mumbai, Feb 2021)** Won the Best Hack Build on Ethereum + Matic Prize of **$200**.
- **HackNITR 3.0 (NIT Rourkela, Oct 2021)** Won the Best Dapp Built on Celo Prize of **$265**.

Online Certifications

- **Advanced Machine Learning and Signal Processing (IBM, April 2020)**
- **Neural Networks and Deep Learning (Deeplearning.ai, May 2020)**
- **Structuring Machine Learning Projects (Deeplearning.ai, May 2020)**
- **Improving Deep Neural Networks: Hyperparameter Tuning, Regularization and Optimization (Deeplearning.ai, May 2020)**
- **Convolutional Neural Networks (Deeplearning.ai, June 2020)**
- **Sequence Models (Deeplearning.ai, July 2020)**
- **Image Super Resolution Using Autoencoders in Keras (Coursera, July 2020)**
- **Generate Synthetic Images with DCGANs in Keras (Coursera, July 2020)**
- **Regression with Automatic Differentiation in TensorFlow (Coursera, July 2020)**
- **Sequences, Time Series and Prediction (Deeplearning.ai, March 2021)**
