Rudresh **Veerkhare**

MSCSE Student, UC San Diego

 rudresh.net   @ veerkharerudresh@gmail.com   RudreshVeerkhare   in rudresh-veerkhare   Google Scholar

Research Interests

My research sits at the intersection of **Discrete Differential Geometry, geometry processing, and physics-based simulation**. Right now I'm focused on:

> **Point-vortex dynamics on genus-g surfaces** — building mesh-based formulations that match analytical solutions on the plane, then extending to higher-genus shapes.

> **Geometric & topological algorithms for fluid flow** — harmonic decomposition, pressure projection, and efficient Poisson solvers that respect manifold structure.

> **Physically based graphics** — leveraging the same DDG foundations for robust rendering and visualization.

Experience

Current **Jan 2025**	**UC San Diego | CSE 8A: Intro to Programming [%]** *Teaching Assistant | Taught by: Prof. Leo Porter*	**San Diego, USA**

Designing exams & quizzes, **coordinated** programming labs, and **conducted** office hours & discussion sessions.

Mar 2025 **Jan 2025**	**UC San Diego | CSE 167: Computer Graphics [%]** *Teaching Assistant | Taught by: Prof. Albert Chern*	**San Diego, USA**

Ran **weekly office hours** for one-on-one help and **hour-long discussion sessions** on engaging graphics topics; crafted a student-friendly **ray-tracing final project**; and worked on a **Gradescope autograder** for fast, consistent grading.

Aug 2024 **Jul 2022**	**Deutsche India | Chief Technology Office, TDI** *Senior Analyst*	**Pune, India**

I worked on OCR and **Document Understanding** to streamline document processing. My work spanned **Custom Document Entity Extraction**, **Smart Document Splitting**, **LLM-aided Contract Drafting**, and innovative software automations like **Automated Vulnerability Scanning**. I have also worked on the adaptation of **Document AI** within the organization and have experience in **Software Governance**.

Jul 2021 **Jun 2021**	**Deutsche India | Chief Technology Office, TDI** *Technology Analyst Intern*	**Pune, India**

As part of the research project, I worked on Optical Character Recognition, which encompassed tasks such as **Table Detection**, **Table Structure Recognition** from scanned documents, **Signature Extraction**, **Custom Named Entity Recognition**, and **Intelligent Character Recognition**.

Apr 2021 **Jan 2021**	**Sardar Patel Institute of Technology** *Research Assistant | Advisor: **Prof. Pramod Bide***	**Mumbai, India**

I conducted research in the field of **Cross Event Detection** and **Topic Evolution Mining** from Social Media Posts, developing innovative algorithms for Cross Event Detection and **Sub-Topic Evolution** through the application of statistical NLP techniques.

Education

May 2022 **Aug 2018**	**University Of California, San Diego** MS, Computer Science & Engineering | **GPA**: 3.7/4	**California, USA**
May 2022 **Aug 2018**	**Sardar Patel Institute of Technolgy** B.Tech, Computer Engineering | **CGPA**: 9.63/10	**Mumbai, India**

Awards

> **India Excellence Award (Deutsche Bank, Feb 2023)** Award granted to only **280 out of 17000** (1.65%).

> **Best Graduation Project Exhibition Award (SPIT Mumbai, Apr 2022)** Awarded **1st prize** for project **FedSpam**.

Technical Skill

Programming	Python 3, Java, C, C++, Java, JavaScript, Typescript, Solidity, PowerShell, Shell Script
Frameworks & Libraries	PyTorch, Numpy, Keras, Tensorflow, Scikit-Learn, Huggingface, LangChain, ReactJS, NextJS, Django, Flask, FastAPI, SpringBoot

Research Projects

FedSpam: Privacy Preserving SMS Spam Detection (Team Size: 3)
Federated Learning, NLP, Edge Computing

> FedSpam is an edge computing application which leverages **Federated ML** to **preserve the user data privacy** while using the advanced data-driven ML solutions for spam detection.

CustomXGBoost: XGBoost Implementation with Optimizers (Solo) [in | ○]
Gradient Boosting, Optimizers

> XGBoost **Implementation from scratch** where I've modified the **gradient boosting** to utilize optimizers such as **ADAM** and **RMSProp**.

Arbit: A Decentralized Crypto Exchange Arbitrage System (Solo)
Linear Algebra & Graphs, Blockchain Smart Contracts

> Developed an efficient algorithm with **O(1)** time complexity for detecting **Nth order arbitrage** opportunity in Decentralized Crypto Exchanges (DeX).

> Utilized graphs and linear algebra in the derivation process.

> Implemented the system on the Cloud with optimal regions for low network latency, enabling continuous real-time blockchain monitoring and swift execution of profitable arbitrage transactions.

> Created a profitable personal project, generating approximately **$10,000** in cryptocurrency in early 2022.

HRescue: A Modern ML approach for Employee Attrition Prediction (Team Size: 3)
Gradient Boosting, Explainable AI, Data Augmentations

> Numerous attrition prediction methods have been developed in the past. However, This approach focuses on **interpretability** of ML models for sensitive employee attrition decisions and **outperforms prior methods** while addressing **data imbalance**.

Face To BMI: A Deep Learning Based Approach for Computing BMI from Face (Team Size: 3)
Computer Vision, Transfer Learning, Discriminative Learning

> Developed a BMI prediction model from facial images using **transfer learning** on deep convolution networks, implementing **discriminative learning** to train the last few layers with varying learning rates for further model fine-tuning.

> Used **Tensor Processing Unit** for training Deep Learning models.

Software Projects

Catalyst (Solo) [⦿ | % | **in**]

Open Source, Node js, VSCode Extension

> Catalyst is a VS code Extension to accelerate the process of solving problems on Codeforces. It has **3000+ installed user and 12000+ downloads**

ReactPy (Solo) [⦿ | **in**]

Open Source, Web Python, Algorithm

> ReactPy is a implementation of React in Python using Brython. It's a **from scratch implementation** of **React Fiber**, along with **diffing and Virtual DOM** in Python 3.

Numras (Solo) [⦿]

Open Source, Numpy, Neural Networks

> A **mini-framework** completely **implemented from scratch** using Numpy. Its api is similar to **Keras.** All of the operations like forward pass, backward pass and optimizations are carried mathematically from scratch.

Recruitment Assisting Platform (Team Size: 4) [⦿]

Data Mining, Data Visualization

> Used **Latent Dirichlet Allocation (LDA)** for grouping candidates based on the Resume.

Elliptical Curve Diffie Hellman (Solo) [⦿]

Cryptography, Algorithms

> Implemented **Elliptical Curve Diffie Hellman Key Exchange algorithm**, from scratch.

Relevant Course Work

● Artificial Intelligence and Soft Computing ● Fundamentals of Computational Intelligence ● Machine Learning ● Big Data Analytics ● Data Science ● Data Warehouse Mining ● Human Machine Interaction ● Operating Systems ● Discrete Structure and Graph Theory ● Theoretical Computer Science ● Advanced Data Structures ● Distributed Systems ● Digital Signal Processing ● Database Management Systems ● Design and Analysis of Algorithms ● Engineering and Applied Mathematics

Volunteering

40+ Hours of CSR, Deutsche India   **2022 - Present**

> Volunteered for development of applications to spread awareness about Mental Health.
> Volunteered for School Kit Assembly and Distribution for underprivileged children.
> Volunteered for crafting of environment friendly paper bags.

Scikit Learn Open Source Contribution [⦿ | %]   **Nov 2022**

> Implemented an Enhancements Proposal for allowing Minkowski distance with $0 < p < 1$.

10+ Hours of SEVA, Mumbai   **2019 - 2020**

> Volunteered for teaching Maths and Science to high school underprivileged children.
> Volunteered for Mumbai's Beach Cleaning.

Hackathons

> **Predicting House Prices In Bengaluru (Machine Hack, Feb 2021)** Ranked **6th** out of 403 submissions (Top 1.4%).
> **Predict The Data Scientists Salary In India (Machine Hack, July 2020)** Ranked **3rd** out of 192 submissions (Top 1.5%).
> **Predict The Price Of Books (Machine Hack, July 2020)** Ranked **46th** out of 847 submissions (Top 5%).
> **Video Game Sales Prediction (Machine Hack, June 2020)** Ranked **24th** out of 231 submissions (Top 10%).
> **Computer Vision Classic (Machine Hack, July 2020)** Ranked **10th** out of 87 submissions (Top 11%).
> **JanataHack: Machine Learning for IoT (Analytics Vidya, May 2020)** Ranked **28th** out of 202 submissions (Top 14%).

> **KJSCE HACK 6.0 (KJSCE Mumbai, Apr 2022)**   Won the Filecoin Track Prize of **$260**.

> **SPIT Hackathon 2021 (SPIT Mumbai, Feb 2021)**   Won the Best Hack Build on Ethereum + Matic Prize of **$200**.

> **HackNITR 3.0 (NIT Rourkela, Oct 2021)**   Won the Best Dapp Built on Celo Prize of **$265**.
